## Introduction

The recently graduated engineer will be required to know about matters related to professional practice which are not usually dealt with during the academic time. He will be required to know about matters related to engineering practice, rules and regulations, both locally and internationally. In addition, he must work on improving the personal skills to support him in the development of professional career. This course will provide the recently graduated engineers about an overview of engineering practices and essential work skills to be acquired.

## Objective & Benefits

- Enlightened the recently graduated engineers and architects to engineering profession, requirements and required job skills.
- Learn the nature of engineering practice market and requirements.
- Ethics in Engineering and its impact on employee's future.
- Introduce the day to day skills required in their job to enhance the productivity, communication, time management and various essential skills.
- Introduce the difference between accountability, responsibility and ownership.
- Learn the corporate social responsibility for business.
- The participants will learn on how to manage their own personnel development
- To be aware on the projects management steps.
- Knowledge on different problem solving techniques and blocks.

## Who Should Attend?

Recently graduated students in any field of engineering, architecture and relevant disciplines who have graduated since maximum of three years.

Others students who think that they can benefit from the program can also attend.

## Course Methodology

A combination of any of the following may be applied

- Reflective Reviews
- Knowledge Reviews
- Oral Presentations
